“La tenda non chiude, non separa l'interno e l'esterno, ma apre a nuove prospettive di luce e trasforma l'ambiente in uno spazio vitale”.

Drive è un elegante sistema a rullo con supporti in alluminio concepito per schermature dal design minimale. Gli ingombri ridotti del meccanismo (mm 50x55) consentono l'applicazione diretta ad ogni tipo di infisso.

“The blind does not close, it does not separate the indoors and outdoors, it opens up to welcome new light perspectives and transforms the environment into a vital space”. Drive is an elegant rollerblind system with aluminium supports designed for minimalist design screening. The reduced size of the mechanism (50x55 mm) enables direct application to all types of frame.

« Le store ne ferme rien, il ne sépare pas l'intérieur de l'extérieur, mais il ouvre de nouvelles perspectives de lumière et transforme l'environnement en un espace vital ». Drive est un élégant système enrouleur avec des supports en aluminium conçus pour une protection au design minimaliste. Les encombrements réduits du mécanisme (50x55 mm) permettent une application directe pour tout type de fixation.

“La cortina no cierra, no separa el interior del exterior, sino que abre a nuevas perspectivas de luz y transforma el ambiente en un espacio vital”. Drive es un elegante sistema de rodillo con soportes de aluminio concebido para coberturas de diseño minimalista. Las reducidas dimensiones del mecanismo (50x55 mm) permiten instalarlo directamente en cualquier tipo de puerta o ventana.

L'opzione con guide laterali in acciaio è proposta qualora l'infisso disponga di apertura a vasistas. Come altri modelli Everest Project, il rullo DRIVE può adottare il sistema "zip" per la facile rimozione e reinserimento del telo in tessuto.

The option of steel side guides is offered where the frame has a transom opening. Just like other Everest Project models, the DRIVE rollerblind can be equipped with the zip system for easy removal and reinsertion of the textile fabric blind.

L'option avec les guides latéraux en acier est proposé si l'encadrement dispose d'une ouverture vasistas. Comme pour d'autres modèles Everest Project, l'enrouleur DRIVE peut adopter le système « zip » pour un retrait et une réinsertion facile de la toile en tissu.

La opción con guías laterales de acero se ofrece cuando la puerta o ventana tenga apertura proyectante. Al igual que otros modelos Everest Project, el rodillo DRIVE puede adoptar el sistema "zip" para facilitar la extracción y el montaje de la cortina de tejido.
